

5/2/17 ~~one or more circumferential grooves provided in at least each side region of the tread~~  
portion, the cords of each of the innermost cord layer and the middle cord layer have an  
inclination angle of 10-25° with respect to the equatorial plane, and cords of an outermost cord  
layer have an inclination angle of 45-115° with respect to the equatorial plane as measured in the  
same direction as in the cords of the middle cord layer, and the outermost cord layer has a width  
extending toward an end of the tread portion over an outermost groove edge of an outermost  
circumferential groove in a widthwise direction of the tread portion.
